

New Correctional Facility for Women Construction Update for January 13, 2017

We have completed construction week #42 of the new Correctional Facility for Women in Concord; we continue to be on schedule and within budget.

The roof on the minimum security housing has been installed (pic below) and is warrantied for 30 years.

We are also installing roofs on the main building also where we have an EPDM material also warrantied for 30 years. EPDM is an extremely durable synthetic rubber roofing membrane (ethylene propylene diene terpolymer) widely used in low-slope buildings worldwide. In order to meet the NH's new 30 year warranty requirements on all state buildings, a new thicker 90 mils roof is being installed and fully adhered to the metal roof deck with the seams of the roofing system sealed with liquid adhesives and specially formulated tape near the mechanical structures.
